 Objective 2.48058

Objective #2.48058

Status: in progress

Acquire one or more classroom sets of laptop computers for use in regular classrooms.

Resources Needed: Additional Technology

Technology Classification: Computer Hardware

Requested Amount: \$21,000.00

Description:

A mobile classroom set of laptops. This estimate is for 40 laptops with 2 mobile charging stations. This set could be used for one large class or for two smaller classes if some of the students could bring their own laptops. This estimate is based on \$500 for each laptop and \$500 for each mobile charging station (per 20 computers). We could use the existing college wireless network for internet access or purchase a wireless hub for the class set.

Reason:

Having a mobile computer lab would enable us to schedule more Fast Track Math sections. In addition to having S301 as a fixed lab, a mobile lab would provide more options for scheduling the sections.

Location: Mobile, stored in Math & Science Division

New or Replacement: New Installation

Services Required: Electricity, College Network Access, Software Support, Hardware Support

Plan: 1284 Submitted: 10/17/2013

Program's SLO Information - Requested Resources (1c)

We requested 6 new computers and a reconfiguration of S301 which was acquired for the Summer of 2013. We requested a class set of laptops that was approved but is in the process of being purchased. We are still rolling out these courses, and only Math 33 has been taught twice. We do not want to include first semester data from our new classes as we are working out the kinks that first semester.
