COR 6 – The soil was contaminated with gasoline and needed to be remediated.

COR 7 – The soil contained clay and was unsuitable for use below the footings of the building.

COR 8R – The footing for the existing structure encroached into the area needed for the footing of the new building, so a portion of the existing footing needed to be removed.

COR 10R1 – The shear wall of the existing building was penetrated by the new construction. For structural safety, a new shear wall was required.

COR 11R1 – A sectional-type door was described in the specifications, but due to the College’s need to use a vehicle lift in that area, a roll-up door was required.

COR 12R1 – The College received a credit for a water line that was proposed for a future hydrant, which will be installed as part of the Central Plant project.

COR 30 – Due to shear wall requirements and floor slab elevations the original split 6’ door needed to be replaced with a new 4’ wide door.
